

Breath Testing for Digestive Disorders

Breath Analyzers and Kits

QuinTron BreathTracker SC Analyzer

The Breath Tracker SC analyzer, combined with the AlveoVac accessory, enables your practice to offer testing inhouse as well as the opportunity to allow patients to collect breath samples at home, work, school or wherever they are most comfortable, without supervision.

Breath samples collected and stored in QuinTron's glass vials remain stable for up to 14 days before analysis. Test kits can safely be transported between locations via air or ground mail service without compromising the integrity of your patient's breath samples.

AlveoSampler™ System

The AlveoSampler system is the most economical way to collect breath samples from patients on-site at your facility. This is a disposable, single-patient collection system used to collect alveolar air in a special syringe designed for breath collection and immediate analysis on a QuinTron breath analyzer. Perfect for on-site testing and fast results.

GaSampler™ System

The GaSampler system is QuinTron's standard on-site breath collection system. The disposable, single-patient collection system takes the guesswork out of sample collection. It can be used with adults or pediatrics (*with simple modifications*) and provides consistent collection from sample to sample. Samples are stable in the collection bag for up to 6 hours. Ideal for most practitioners.

EasySampler™ System

The EasySampler is our most popular in-home breath testing kit. This patented closed-system breath collection device gives patients the ability to collect breath samples in the comfort of their own home, without supervision, saving your staff time from performing the tests on-site. The patient then mails or drops off the completed test kit to your office or one of our lab partners for analysis.
